

```
In [1]: import pandas as pd
import seaborn as sns
import matplotlib.pyplot as plt
```

```
In [2]: df=pd.read_csv("Titanic-Dataset.csv")
```

```
In [3]: sns.boxplot(x="Sex", y="Age", hue="Survived", data=df)
plt.title('Age Distribution by Gender and Survival')
plt.xlabel('Gender')
plt.ylabel('Age')
plt.show()
```

Observation 1: Female passengers have a higher proportion of survivors compared to males.

Observation 2: Younger people have higher survival rate.

Observation 3: Female survivors tend to have a slightly higher median age than male survivors.

Observation 4: There are several age outliers, especially among male passengers.

Observation 5: Age variation is larger in males compared to females.
